

e-District Grievance Management

PROJECT REPORT

Submitted by

ANJALI T P

KMC23MCA-2005

to

the APJ Abdul Kalam Technological University in partial fulfillment of the requirements
for the award of the Degree

of

Master of Computer Applications

Department Of Management Studies & Computer Applications

KMCT College of Engineering

Kallanthode, NITC P.O, Kozhikode-673601

April 2025

DECLARATION

I undersigned hereby declare that the project report **e-District Grievance Management** , submitted for partial fulfillment of the requirements for award of degree of Master of Computer Applications of the APJ Abdul Kalam Technological University, Kerala is a bonafide work done by me under supervision of **Ms. Sharafunnissa O.** This submission represents my ideas in my own words and where ideas or words of others have been included, I have adequately and accurately cited and referenced the original sources. I also declare that I have adhered to ethics of academic honesty and integrity and have not misrepresented or fabricated any data or idea or fact or source in my submission. I understand that any violation of the above will be a cause for disciplinary action by the institute and/or the University and can also evoke penal action from the sources which have thus not been properly cited or from whom proper permission has not been obtained. This report has not been previously formed the basis for the award of any degree, diploma or similar title of any other University.

Place: Kallanthode

ANJALI T P

Date:

DEPARTMENT OF MANAGEMENT STUDIES & COMPUTER APPLICATIONS

KMCT COLLEGE OF ENGINEERING

Kallanthode, NITC P.O, Kozhikode-673601

CERTIFICATE

This is to certify that the report entitled **“e-District Grievance Management”** submitted by **ANJALI T P (KMC23MCA-2005)** to the APJ Abdul Kalam Technological University in partial fulfillment of the requirements for the award of the Degree of Master of Computer Applications is a bonafide record of the project work carried out by her under our guidance and supervision. This report in any form has not been submitted to any other University or Institute for any purpose.

Internal Supervisor

Project Coordinator

External Examiner

Head of the Department

ACKNOWLEDGEMENT

I would like to take this opportunity to extend my sincere thanks to people who helped me to make this project possible. This project will be incomplete without mentioning all the people who helped me to make it real.

First and foremost I thank **Dr. Sabiq PV (Principal, KMCT College of Engineering)** who gave me all support to this project. I also thank **Dr. Shamla NK (Dean, KMCT School of Business)** and **Mr. Ajayakumar KK (Head of the Department, MCA)** for providing all the facilities and resources for my project. I would also like to express my gratitude towards **Ms. Sharafunnisa O (Assistant Professor, MCA)**, Project Supervisor and **Ms. Athulya Prabhakaran (Assistant Professor, MCA)** Project Coordinator as well as **Ms. Remmya CB (Assistant Professor, MCA)** Project Coordinator for their continuous support, guidance and supervision without which the project wouldn't have been a reality. I would also take this opportunity to thank all my friends who took time out of their busy schedule to encourage, support and motivate me which has been the key reason for the successful completion of this project.

Above all I thank God, the almighty for his grace without which it would not have been possible to complete this work on time.

ABSTRACT

The e-District Grievance Management project for Pattambi Taluk is an initiative aimed at improving public service delivery by providing a streamlined and transparent platform for lodging complaints about government services. Citizens can easily file grievances through the online portal, furnishing necessary details along with supporting documents such as images, videos, or written explanations to substantiate their concerns. The system ensures real-time tracking of complaints, keeping users informed at every stage and enabling greater transparency. To reinforce accountability, unresolved grievances are automatically escalated to higher authorities, ensuring prompt action. Recognizing the digital divide, common service centers have been established in rural and remote areas to assist individuals with limited internet access or digital literacy, making the grievance redressal system accessible to all.

By integrating with various government departments, this project enhances interdepartmental coordination, expediting the resolution process and reducing bureaucratic delays. The platform plays a crucial role in fostering trust between citizens and government institutions by ensuring that grievances are handled efficiently and fairly. Moreover, the system's user-friendly interface and multiple complaint-filing channels empower residents to actively participate in governance. By prioritizing accessibility, responsiveness, and transparency, the e-District Grievance Management project serves as a model for effective citizen-centric governance, ultimately contributing to a more accountable and efficient public administration.

Chapter 1

INTRODUCTION

The e-District Grievance Management project for Pattambi Taluk is an online system that enables citizens to easily file complaints about government services and get them resolved quickly, without having to visit government offices. Users can submit their complaints online, providing detailed descriptions along with supporting materials like images, videos, or documents to explain their issues clearly. The portal also allows users to track the progress of their complaints in real-time, keeping them updated at each stage. If a complaint isn't resolved within a certain period, it is automatically escalated to higher authorities for timely action. The system integrates with different government departments, helping to speed up communication and resolution. To ensure accessibility, service centers in villages and remote areas assist those with limited internet access or digital skills in filing complaints and tracking their progress. The portal provides several ways to submit complaints, such as through the website and with help from service center staff, ensuring that everyone can use the system in the way that suits them best.

By prioritizing simplicity, transparency, and accessibility, the e-District portal project makes it easier for people to raise concerns and get timely solutions. The system ensures every complaint is properly followed up, improving accountability and responsiveness from government departments. It also reduces paperwork, cuts down delays, and speeds up the resolution of issues, leading to more efficient public services. With the combination of digital technology and local support centers, the project ensures that no one is left behind, even in remote areas.

1.1 General Background

The general background of the e-District Grievance Management highlights the growing need for an efficient and transparent system for handling public complaints. In traditional systems, citizens often faced delays, lack of proper communication, and difficulty in tracking their grievances, leading to frustration and inefficiency. With the increasing adoption of digital governance, an online grievance redressal system provides a more structured and accessible way for people to report issues related to government services. This system allows users to register, submit complaints with supporting documents, and track their status in real time. It ensures better coordination between government departments, leading to faster resolutions and improved public service delivery. By automating the process, the system minimizes manual work, enhances accountability, and strengthens the relationship between citizens and authorities, making governance more responsive and effective.

1.2 Objective

The objective of the e-District Grievance Management project for Pattambi Taluk is to provide a convenient, user-friendly platform for citizens to file complaints about government services and track their resolution. The project aims to enhance accessibility by allowing individuals, regardless of their location or digital skills, to easily participate in the grievance redressal process. Transparency is a key goal, as the portal enables citizens to track the status of their complaints in real-time, ensuring they are kept informed throughout the process. Additionally, the system fosters accountability by automatically escalating unresolved complaints to higher authorities, ensuring timely action and preventing delays. The project also seeks to improve efficiency by streamlining communication between government departments, which helps resolve issues faster. To address digital inclusion, service centers are established in rural and remote areas to assist people with limited internet access or digital skills in filing and tracking complaints.

1.3 Scope

The scope of the e-District Grievance Management project for Pattambi Taluk includes the development and implementation of an online platform that enables citizens to easily file and track complaints about government services. The system will cover a wide range of public services, allowing citizens to raise concerns about any service provided by government departments. The portal will support multiple types of complaint submissions, including text descriptions, images, videos, and documents to provide comprehensive details of issues. The project also includes the integration of the portal with various government departments to ensure smooth communication and efficient complaint resolution. To cater to individuals with limited internet access or digital literacy, the scope includes setting up service centers in rural and remote areas, where trained staff will assist citizens in filing and tracking complaints. Furthermore, the portal will allow real-time tracking of complaints, automatic escalation of unresolved issues, and notifications to users at every stage of the resolution process. The system aims to provide a user-friendly, transparent, and efficient experience for all citizens of Pattambi Taluk, fostering accountability and building trust in the government's responsiveness. The project will also focus on reducing the physical visits to government offices by enabling a fully digital grievance redressal system, making it more accessible and convenient for everyone.

Chapter 2

LITERATURE SURVEY

2.1 Literature Survey for e-District Grievance Management

The e-District Grievance Management system has emerged as a critical tool for improving public service delivery and enhancing transparency and accountability in government operations. In a study by R. K. Gupta and A. Singh, titled “E-Governance and Grievance Redressal in India: A Case Study of e-District Project,” the authors highlight the importance of digital platforms in addressing citizens’ grievances efficiently. The study focuses on the effectiveness of e-District initiatives in streamlining grievance redressal processes, improving communication between citizens and government departments, and reducing response time for resolving complaints. They suggest that such systems enhance transparency and encourage government accountability by providing real-time updates to users about the status of their complaints [1]. Another article by S. Bansal and M. Verma, “Transforming Public Service Delivery through ICT: The e-District Framework,” emphasizes how technology can bridge the gap between citizens and public administration, thus ensuring better governance and improving the citizen’s trust in the system. This article explores the various components of the e-District framework, including grievance management, and discusses the significant role of information and communication technology (ICT) in simplifying complaint management and resolving issues promptly [2].

In the book *E-Governance: Principles, Applications, and Case Studies* by P. Bhatnagar, the author delves into the broader concept of e-Governance, with a particular focus on grievance management systems. Bhatnagar explains how e-District portals can effectively handle complaints by streamlining processes and providing citizens with easy access to government services. He also discusses the impact of such systems on governance, highlighting the importance of transparency and accountability in public administration [3]. Another textbook, *Public Administration and E-Governance* by R. S. Suri, offers valuable insights into the role of e-Governance in improving the management of public grievances. Suri addresses the challenges and opportunities that digital systems like the e-District portal present in enhancing grievance redressal and improving the quality of public services. He emphasizes the role of technology in creating a more responsive and transparent government [4].

Lastly, a report on the official website of the Government of India titled “e-District Project – A Step Towards Digital Governance” provides an overview of the nationwide e-District initiative. The website outlines the implementation of the e-District portal, its objectives, and how it simplifies the process of filing complaints and tracking their status. It discusses the integration of various government departments and emphasizes how e-District systems contribute to faster, more efficient complaint management and resolution [5].

Chapter 3

SYSTEM ANALYSIS

3.1 Existing system

The existing grievance management systems in many government sectors are mostly manual, where citizens have to visit government offices, fill out paper forms, and wait for a long time to get their complaints resolved. This traditional approach often leads to delays, lack of transparency, and frustration for citizens. In response, digital systems like the e-District portal have been introduced, allowing people to file complaints online, track their progress in real-time, and receive updates. These digital systems have made the process faster and more transparent, but they still face challenges. Many areas, especially rural ones, have limited internet access, and some citizens lack the digital skills to use online platforms. Additionally, communication between government departments can still be slow, leading to delays in resolving complaints. While the digital systems have improved the grievance management process, there is still potential to make them more accessible, efficient, and better integrated with other government services to ensure timely resolution of issues.

3.2 Proposed system

The proposed system for the e-District Grievance Management Portal is designed to provide a transparent, efficient, and user-friendly platform for citizens to file complaints regarding government services. Users can register, submit complaints with supporting documents such as images or PDFs, and track their status in real time, ensuring an accessible and accountable grievance redressal process. The system incorporates automated escalation mechanisms, where unresolved complaints are forwarded to higher authorities for timely resolution. It enhances coordination between different government departments, enabling officials to review, assign, and manage complaints effectively. The integration of structured workflows and digital tracking reduces manual paperwork, minimizes delays, and improves overall response times. Citizens receive notifications on complaint updates, ensuring they remain informed throughout the process. By leveraging technology, the system streamlines grievance handling, fosters trust between the public and authorities, and contributes to a more efficient and responsive governance system.

3.2.1 Core Functionalities

- **Complaint Registration**

- Citizens file complaints online with details and supporting documents.

- **Real-Time Tracking**

- Users track the status of their complaints.

- **Automatic Forwarding**

- Unresolved complaints are forwarded to higher authorities.

- **Complaint Categorization**

- Complaints are sorted for efficient handling.

- **Departmental Integration**

- Connects with government departments for better communication.

- **Reports and Analytics**

- Generates performance reports and complaint trends.

3.3 Module Description

The "e-District Grievance Management" system includes integrated modules designed to streamline complaint redressal, enhance communication between citizens and government authorities, and improve overall efficiency in handling grievances. Each module plays a crucial role in ensuring a transparent and responsive grievance management process. Below is an overview of the key modules:

3.3.1 User

The User Module enables citizens to register, log in, and file complaints regarding government services through the e-District portal. Users can describe their issues in detail and upload supporting documents such as images, videos, or PDFs for better clarity. Once a complaint is submitted, users can track its status in real-time and view the assigned government official handling their case. After resolution, users can provide feedback and rate the response to help improve service quality. Additionally, the portal features a leaderboard where users can view the rankings of government officials based on their efficiency in resolving complaints. For those with limited internet access or digital literacy, Common Service Centers are available to assist with filing complaints and accessing services. This module ensures a seamless and transparent grievance redressal process, making it easier for citizens to engage with government authorities.

3.3.2 Admin

The Admin Module serves as the central hub for managing and overseeing complaint redressal in the e-District portal. Admins receive all submitted complaints and categorize them based on the relevant department before assigning them to the appropriate government officials. They can monitor the progress of each complaint, ensure timely resolution, and escalate unresolved cases if necessary. Additionally, admins generate reports on complaint trends, resolutions, and response efficiency. They also manage user feedback and ratings to assess service quality. The leaderboard is monitored by the admin to track the performance of government officials in resolving complaints. This module ensures smooth operation, transparency, and accountability in the complaint management system.

3.3.3 government official

The government officials module is designed for officials such as the tahsildar, village officers, and other department authorities to handle and resolve complaints assigned to them through the e-District portal. Officials can view complaints, update their status, and provide resolutions within the system. They are responsible for ensuring timely action on complaints and can communicate with users if additional information is required. After resolving a complaint, officials' performance is assessed based on user feedback and ratings. They can also view their rankings on the leaderboard, which reflects their efficiency in handling grievances. This module ensures effective complaint redressal, promoting transparency and accountability within government services.

3.4 Feasibility Study

A feasibility study assesses whether the e-District Grievance Management System is practical, efficient, and beneficial for implementation. The study covers different aspects to ensure its successful deployment.

3.4.1 Operational Feasibility

The system simplifies grievance filing, tracking, and resolution, making it more efficient for both citizens and government authorities. It ensures transparency and faster responses by automatically forwarding unresolved complaints to higher officials. Training sessions for government employees and awareness programs for citizens will help in smooth adoption. The system should be easy to use, ensuring that people with minimal digital skills can access it without difficulty. A dedicated support team can assist users in case of any issues.

3.4.2 Technical Feasibility

The system requires a robust, secure, and scalable web-based platform that integrates with government databases. It must support online complaint registration, document uploads, real-time tracking, automated forwarding, and secure data storage. The use of cloud computing, secure servers, and a user-friendly interface ensures smooth operation. Additionally, the system should be compatible with multiple devices, including computers and mobile phones, for wider accessibility. Proper cybersecurity measures are essential to protect sensitive user data.

3.4.3 Economic Feasibility

The implementation cost includes system development, hosting, maintenance, and training for government officials and support staff. While the initial investment may be high, the system significantly reduces manual workload, paperwork, and administrative costs. By improving efficiency and accountability, the system can lead to cost savings in the long run. Additionally, government funding and digital transformation initiatives can help cover expenses, making the project financially feasible.

3.5 System Environment

The successful implementation of the "e-District Grievance Management" requires the deployment of specific tools and resources. Below is an overview of the essential requirements for this platform.

3.5.1 Developer Requirement

Hardware Requirement

- **Processor:** Intel Core i3 and above
- **Ram:** 8GB or Above
- **Storage:** 512GB SSD

Software Requirement

- **Operating System:** Windows 11
- **Programming Languages:**
 - **Frontend:** HTML,CSS,Javascript
 - **Backend:** NodeJS, ExpressJS
 - **Database:** MongoDB
- **Integrated Development Environment (IDE):** VS code

3.5.2 User Requirement

- Smartphone, Laptop, Computer
- Stable Internet Access

3.6 Actors and their Roles

3.6.1 Admin

- Manage Users
- View And Assign Complaint.
- Manage Meeting Request And Set Meeting.
- Monitor Complaint Status.
- Generate Overall Complaint Report.
- Analyze Feedback And Ratings.
- Manage Leaderboard.

3.6.2 User

- File Complaint
- View Complaint History
- Rate Complaint
- Provide Feedback
- View Leaderboard

3.6.3 Government Officials

- View Assigned Complaints
- Manage Complaints
- Request To Meetings
- Generate Report
- View Feedback And Ratings
- View Leaderboard

Chapter 4

SYSTEM DESIGN

4.1 METHODOLOGY

The Agile methodology is used for this project. Agile software development refers to several methods for creating software in which end users, customers, and self-organizing, cross-functional teams work together to produce requirements and solutions. It promotes flexible and quick responses to change, as well as adaptive planning, evolutionary development, early delivery, and continuous improvement. It is a method for project management that involves constant communication and iterative development. These principles and the frameworks for putting them into practice, such as Scrum, Extreme Programming (XP), and the Adaptive Project Framework, are now referred to as "agile" (APF). One thing that separates Agile from other approaches to software development is the focus on the people doing the work and how they work together. Solutions evolve through collaboration between self-organizing cross-functional teams utilizing the appropriate practices for their context.

4.6 Design Phase

Figure 4.4: Schema Diagram

4.7 User Interface Design

4.7.1 Login Screen

The Login Page allows users to securely access the system by entering their credentials. It ensures authentication and provides role-based access to various services related to the taluk administration.

The image shows a login form titled "e-District Portal Login". It features two input fields: "Username" and "Password", both with light gray borders. Below these fields is a prominent blue button with the text "Login" in white. The entire form is centered within a light gray rectangular background.

Figure 4.5: Login Screen

4.7.2 Registration Screen

The User Registration page includes fields for full name, email, contact number, address, date of birth, gender, and password confirmation. It is designed with a simple and responsive layout for ease of use. The form ensures that all required fields are properly validated to enhance user experience and data accuracy. The structured design improves accessibility across different devices, making it easier for users to complete their registration securely.

A user registration form titled "User Registration" is displayed. It contains several input fields: "Full Name", "Email", "Contact Number", "Address", "dd - mm - yyyy" (with a calendar icon), "Select Gender" (with a dropdown arrow), "Password", and "Confirm Password". A blue "Register" button is at the bottom.

4.7.3 File A Complaint

The File a complaint page features a centered form where users can submit complaints by selecting a category, entering a subject, and providing a detailed description. A prominent "Submit" button ensures a seamless complaint submission process. The layout is simple and user-friendly, making it easy for users to report their issues.

The image shows a web form titled "File a Complaint" centered on a light gray background. The form itself is a white rounded rectangle. At the top, the title "File a Complaint" is in bold. Below it, the label "Complaint Category:" is followed by a dropdown menu showing "Services" with a downward arrow. Next is the "Subject:" label followed by a text input field with the placeholder "Enter complaint subject". Below that is the "Description:" label followed by a larger text area with the placeholder "Describe your complaint" and a small icon in the bottom right corner. Underneath is the "Attach File (Optional):" label, followed by a file selection interface showing "Choose File" and "No file chosen". At the bottom of the form is a prominent blue button with the word "Submit" in white text.

Figure 4.7: File A Complaint

4.7.4 View And Assign Complaints

The View and Assign Complaints page displays a structured table of complaints with details such as ID, category, and subject. Admins can assign complaints to relevant personnel using a dropdown menu and an "Assign" button. The layout is clean and user-friendly, ensuring an efficient complaint management process.

View and Assign Complaints				
ID	Category	Subject	Assign To	Action

4.7.9 Rate Complaint

The rate complaint page allows users to provide feedback on how their complaint was handled. It features a simple rating system and an optional comment box for additional feedback. A submit rating button ensures a smooth and user-friendly experience, helping improve service quality.

The form is titled "Rate Your Complaint". It contains the following elements:

- Complaint ID:** A label for the complaint identifier.
- Complaint Details:** A label for the details of the complaint.
- Status:** A label for the current status of the complaint.
- Rate this Complaint:** A section with five yellow stars for rating.
- Feedback Box:** A text area with the placeholder "Leave your feedback here..." for additional comments.
- Submit Rating:** A prominent blue button at the bottom to submit the rating.

5.2 Implementation

After testing, the next phase is Implementation. The proposed system, a e-District Grievance Management Portal, is now ready for this phase, which involves turning the system design into a fully operational application. Implementation includes setting up Grievance management, as well as configuring the web applications for users and administrators.

1. Identify Deployment Environment:

Identify Deployment Environment: Choose a cloud-based platform like Amazon Web Services (AWS) or Google Cloud Platform (GCP) for hosting the application. Ensure the chosen platform provides scalability, security features, and reliable database services.

2. Install Required Software: Set up Node.js for the web application backend to manage the system's core functionality.

3. Backend Application Development: Develop backend applications using Node.js for managing workspace functionalities. Implement APIs for communication between the frontend and backend components.

4. Web Application Deployment: Develop a web application frontend using modern frameworks like React. Integrate the frontend with the Node.js backend for user authentication, payment tracking and seat management.

5. Deployment and Maintenance: Deploy the complete system on the chosen cloud platform (AWS/GCP). Provide training to users and administrators for efficient utilization of the system. Establish a maintenance schedule for regular updates, bug fixes, and performance monitoring.

6. Continuous Improvement: Gather feedback from users and stakeholders to identify areas for improvement. Implement updates and enhancements to meet evolving needs and improve system efficiency.

Chapter 6

RESULT AND DISCUSSION

The e-District Grievance Management System enhances public service efficiency by providing a digital platform for citizens to register complaints and track their resolutions seamlessly. By eliminating the need for physical visits to government offices, the system reduces bureaucratic delays and ensures timely responses from authorities. Its integration with various government departments streamlines communication, expediting complaint handling and improving coordination. The escalation mechanism ensures unresolved complaints reach higher authorities, enhancing accountability. With multi-channel accessibility via the online portal and service centers, the system bridges the digital divide, allowing citizens in rural and remote areas to access services effectively. Real-time tracking and automated notifications keep complainants informed, fostering transparency and public trust.

The e-District Grievance Management System enhances public service efficiency by enabling citizens to file complaints online and track resolutions. It reduces delays, improves accountability through escalation, and streamlines communication across departments. Accessibility via an online portal and service centers bridges the digital divide. Real-time tracking and notifications keep users informed, ensuring transparency. Future upgrades like AI-based categorization and mobile integration can boost efficiency. Expanding feedback and service assessments will drive continuous improvement. This system modernizes grievance handling and sets a benchmark for citizen-centric governance.

Chapter 7

CONCLUSION

The e-District Grievance Management System is designed to enhance the efficiency, transparency, and accessibility of public grievance redressal. By integrating multiple government departments and providing citizens with a seamless online platform, the system ensures timely resolution of complaints while reducing bureaucratic delays. With real-time tracking, automated notifications, and accessibility through service centers, it empowers citizens by making the grievance process more structured and responsive. The system also strengthens accountability by escalating unresolved complaints to higher authorities, ensuring that every issue receives proper attention.

As the platform continues to evolve, it aims to set a new benchmark in digital governance by improving service delivery and responsiveness. Future enhancements like AI-driven complaint categorization, predictive analytics, and mobile integration can further optimize efficiency and user experience. Additionally, expanding feedback mechanisms and automated service quality assessments will help identify recurring issues and improve government responsiveness. By bridging communication gaps and streamlining processes, the e-District Grievance Management System fosters greater public trust in governance, making complaint resolution simpler, faster, and more effective for all citizens.

7.1 Future Work

To further enhance the e-District Grievance Management System, several key improvements can be implemented. Improving complaint categorization and tracking mechanisms can help streamline processing and reduce delays. Expanding mobile accessibility through a dedicated app with push notifications and voice-assisted filing can further improve usability. A multilingual interface can also be incorporated to ensure inclusivity for diverse user groups.

Additionally, automated escalation mechanisms can be refined to prioritize urgent grievances and streamline resolution workflows. Seamless integration with digital payment systems for service-related fees and penalties can enhance convenience. To strengthen communication, chatbot-assisted support and real-time grievance discussions can be introduced, allowing citizens to interact more effectively with officials. Furthermore, secure digital record management can be explored to ensure data protection and transparency in complaint processing. These improvements will ensure the system remains a comprehensive, scalable, and adaptive solution for modern governance, ultimately fostering greater public trust and engagement.

APPENDICES

SCREENSHOTS

Home Page

The e-District Grievance Management Portal homepage provides a user-friendly interface for citizens to register and track complaints online. It features easy navigation with options for login, signup, and complaint submission. A "Get Started" button guides users to begin the process, while a notification prompts registration for access. The background image of a gavel symbolizes justice and transparency, reinforcing the platform's purpose of efficient grievance resolution.

Home Page

User Login Page

The login page of the Grievance Management Portal provides a secure and user-friendly interface for registered users to access their accounts. It features fields for entering an email address and password, along with a "Sign In" button for authentication. A "Register Now" option is available for new users who need to create an account, ensuring accessibility for all. The simple and clean design enhances usability, making it easy for users to log in and manage their grievances efficiently.

File Complaint

This page allows users to file a complaint with the Revenue Department regarding issues such as the non-availability of land records. Users can enter a complaint description, specify the grievance locality and site address, select the complaint category, and attach relevant documents before submitting their complaint.

The screenshot shows the 'Add Your Complaint' form on the eDistrict KERALA portal. The form is divided into two main sections: a left column for the complaint details and a right column for administrative information.

Left Column:

- Subject (Short Description):** A text box containing 'Non-Availability of Land Records Online'.
- Description:** A rich text editor with a toolbar (Paragraph, Bold, Italic, Link, Bulleted List, Numbered List, Indent, Outdent, Image, Quote, Table, Undo, Redo) and a text area containing 'Citizens facing issues accessing land records online due to outdated or missing data.'

Right Column:

- Department Concerned:** A dropdown menu with 'Revenue' selected.
- Complaint Category:** A dropdown menu with 'Technical Issues' selected.
- Grievance Locality:** A text box containing 'kuttipuram'.
- Grievance Site Address:** A text box containing 'emirates building'.
- Attachments:** A dropdown menu with 'PDF' selected, a 'Choose File' button, and a file named 'Official Portal.pdf'.
- Add More:** A button to add additional attachments.

Footer: A 'File Complaint' button.

File Complaint

Assign Complaint

This page is the admin dashboard for managing complaints in the grievance portal. It displays a list of pending complaints categorized by subject, status, department, and submission date. Admins can view, search, and assign complaints to the appropriate officials for resolution. The "Assign" button allows the admin to allocate complaints to the relevant department or officer for further action. The status of complaints can be tracked through different stages such as Pending, Assigned, Under Progress, Resolved, and Rejected.

The screenshot displays the Admin Panel Dashboard. On the left is a sidebar with the 'Admin Panel' header and a search bar. Below the header is a 'Dashboard' link, followed by a 'MANAGE' section containing links for 'Manage Users', 'Manage Govt official', 'Manage Meetings', 'Manage Complaints', 'Reports', 'Feedback & rating', and 'Leaderboard'. The main content area is titled 'Dashboard' with a breadcrumb 'Home / Dashboard'. It features a status filter bar with buttons for 'Pending' (yellow), 'Assigned' (green), 'Under Progress' (green), 'Resolved' (green), and 'Rejected' (red). Below this is the 'Pending Complaints' section, which includes a table with 5 entries. The table has columns for 'No.', 'Date', 'Complaint id', 'subject', 'status', 'department', 'days', and 'Manage'. Each row has a red 'assign' button in the 'Manage' column. At the bottom of the table, it says 'Showing 1 to 5 of 5 entries'.

No.	Date	Complaint id	subject	status	department	days	Manage
1	02-04-2025	cmp09	Non-Availability of Land Records Online	Pending	Revenue	0	assign
2	02-04-2025	cmp08	Lack of Healthcare Facilities	Pending	Local Self/Panchayat	0	assign
3	02-04-2025	cmp07	Garbage Disposal Issues	Pending	Local Self/Panchayat	0	assign
4	02-04-2025	cmp06	Drinking Water Shortage	Pending	Local Self/Panchayat	0	assign
5	30-03-2025	cmp03	Illegal Encroachment on Government Property	Pending	Revenue	3	assign
